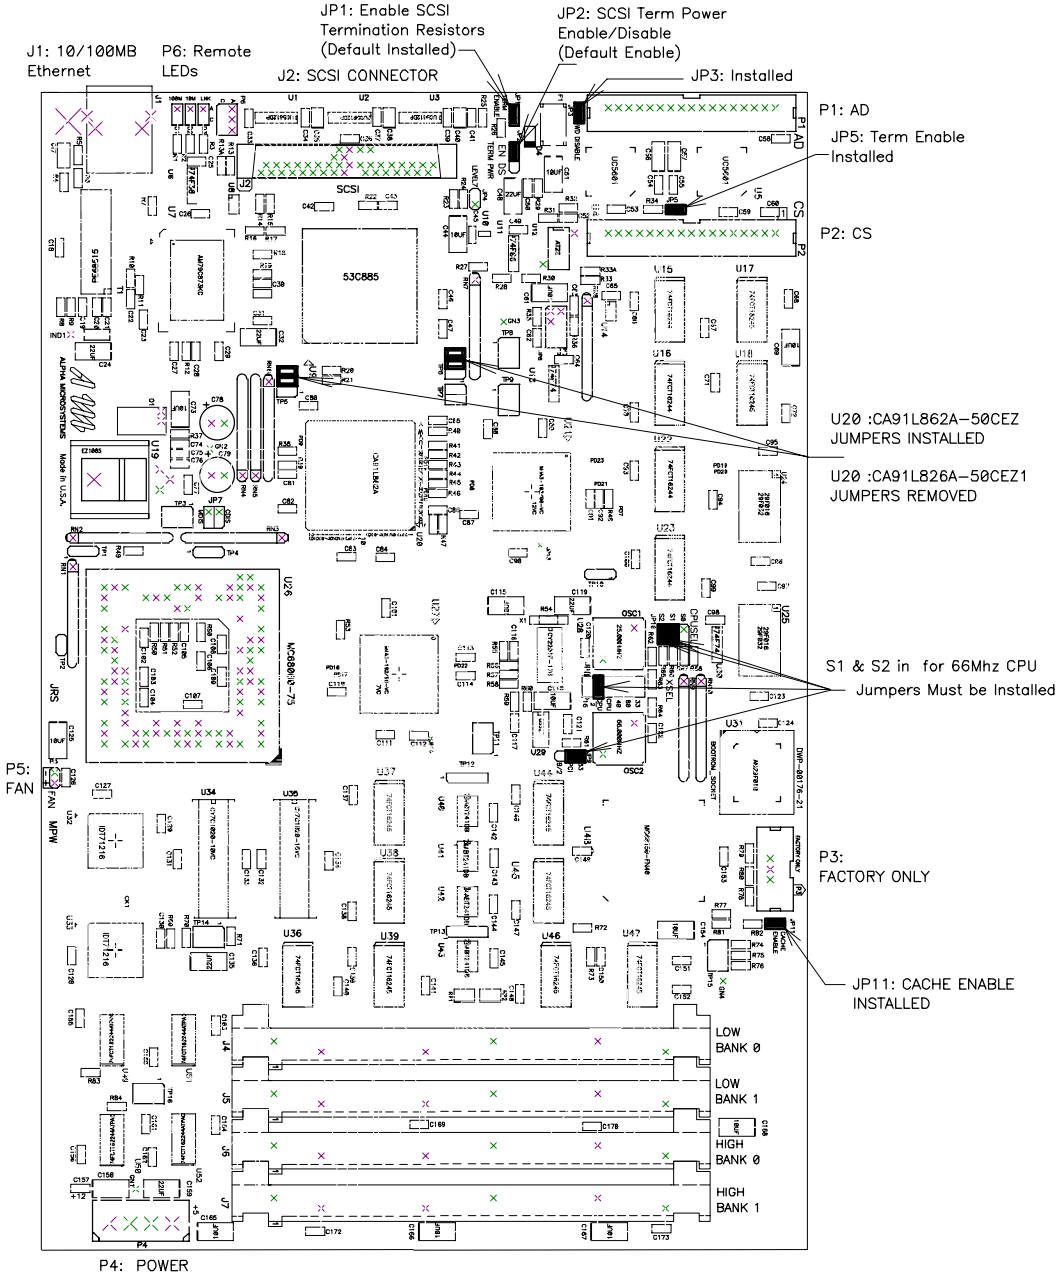
AM-176-12 Board Configuration

Use PDI-00176-11 installation instructions, but replace Figure 4-1 with this page. For software requirements, again see PDI-00176-11

The AM-176-12 board does NOT support the AM-7000 EDO memory. It requires the same Page Mode Memory SIMMs, PFB-00712-XX as the AM-6000 systems.



Jumper Settings for PDB-00176-12 66 MHz CPU with 100 Base T Ethernet Port
